

# **RDA5807M**

# SINGLE-CHIP BROADCAST FM RADIO TUNER

Rev.1.1-July.2011

# 1 General Description

The RDA5807M series is the newest generation single-chip broadcast FM stereo radio tuner with fully integrated synthesizer, IF selectivity, RDS/RBDS and MPX decoder. The tuner uses the CMOS process, support multi-interface and require the least external component. All these make it very suitable for portable devices.

The RDA5807M series has a powerful low-IF digital audio processor, this make it have optimum sound quality with varying reception conditions.

The RDA5807M series support frequency range is from 50MHz to 115MHz.

Figure 1-1. RDA 5807M Top View

#### 1.1 Features

- CMOS single-chip fully-integrated FM tuner
- Low power consumption
  - Total current consumption lower than 20mA at 3.0V power supply when under normal situation
- Support worldwide frequency band
  - > 50 -115 MHz
- Support flexible channel spacing mode
  - > 100KHz, 200KHz, 50KHz and 25KHz
- Support RDS/RBDS
- Digital low-IF tuner
  - Image-reject down-converter
  - ➢ High performance A/D converter
  - > IF selectivity performed internally
- Fully integrated digital frequency synthesizer
  - > Fully integrated on-chip RF and IF VCO
  - Fully integrated on-chip loop filter
- Autonomous search tuning
- Support 32.768KHz crystal oscillator
- Digital auto gain control (AGC)
- Digital adaptive noise cancellation
  - Mono/stereo switch
  - Soft mute

- High cut
- Programmable de-emphasis (50/75 μs)
- Receive signal strength indicator (RSSI) and SNR
- Bass boost
- Volume control and mute
- Line-level analog output voltage
- 32.768 KHz 12M,24M,13M,26M,19.2M,38.4MHz
   Reference clock
- Only support 2-wire bus interface
- Directly support 32Ω resistance loading
- Integrated LDO regulator
  - 2.7 to 3.3 V operation voltage
- MSOP—10pins

#### 1.2 Applications

- Cellular handsets
- MP3, MP4 players
- Portable radios
- PDAs, Notebook

# 2 Functional Description

Figure 2-1. RDA5807M FM Tuner Block Diagram

#### 2.1 FM Receiver

The receiver uses a digital low-IF architecture that avoids the difficulties associated with direct conversion while delivering lower solution cost and reduces complexity, and integrates a low noise amplifier (LNA) supporting the FM broadcast band (50 to 115MHz), a multi-phase image-reject mixer array, a programmable gain control (PGA), a high resolution analog-to-digital converters (ADCs), an audio DSP and a high-fidelity digital-to-analog converters (DACs).

The limiter prevents overloading and limits the amount of intermodulation products created by strong adjacent channels.

The multi-phase mixer array down converts the LNA output differential RF signal to low-IF, it also has image-reject function and harmonic tones rejection.

The PGA amplifies the mixer output IF signal and then digitized with ADCs.

The DSP core finishes the channel selection, FM demodulation, stereo MPX decoder and output audio signal. The MPX decoder can autonomous switch from stereo to mono to limit the output

#### noise.

The DACs convert digital audio signal to analog and change the volume at same time. The DACs has low-pass feature and -3dB frequency is about 30 KHz.

#### 2.2 Synthesizer

The frequency synthesizer generates the local oscillator signal which divide to multi-phase, then be used to downconvert the RF input to a constant low intermediate frequency (IF). The synthesizer reference clock is 32.768 KHz.

The synthesizer frequency is defined by bits CHAN[9:0] with the range from 50MHz to 115MHz.

#### 2.3 Power Supply

The RDA5807M integrated one LDO which supplies power to the chip. The external supply voltage range is 2.7-3.3 V.

#### 2.4 RESET and Control Interface select

The RDA5807M is RESET itself When VDD is Power up. And also support soft reset by trigger 02H BIT1 from 0 to 1. The RDA5807M only support I<sup>2</sup>C control interface bus mode.

#### 2.5 Control Interface

The RDA5807M only supports I<sup>2</sup>C control interface.

The I<sup>2</sup>C interface is compliant to I<sup>2</sup>C Bus Specification 2.1. It includes two pins: SCLK and SDIO. A I<sup>2</sup>C interface transfer begins with START condition, a command byte and data bytes, each byte has a followed ACK (or NACK) bit, and ends with STOP condition. The command byte includes a 7-bit chip address (0010000b) and a R/W bit. The ACK (or NACK) is always sent out by receiver. When in write transfer, data bytes is written out

from MCU, and when in read transfer, data bytes is read out from RDA5807M. There is no visible register address in I<sup>2</sup>C interface transfers. The I<sup>2</sup>C interface has a fixed start register address (0x02h for write transfer and 0x0Ah for read transfer), and an internal incremental address counter. If register address meets the end of register file, 0x3Ah, register address will wrap back to 0x00h. For write transfer, MCU programs registers from register 0x02h high byte, then register 0x02h low byte. then register 0x03h high byte, till the last register. RDA5807M always gives out ACK after every byte, and MCU gives out STOP condition when register programming is finished. For read transfer, after command byte from MCU, RDA5807M sends out register 0x0Ah high byte, then register 0x0Ah low byte, then register 0x0Bh high byte, till receives NACK from MCU. MCU gives out ACK for data bytes besides last data byte. MCU gives out NACK for last data byte, and then RDA5807M will return the bus to MCU, and MCU will give out STOP condition.

## 3 Electrical Characteristics

Table 3-1 DC Electrical Specification (Recommended Operation Conditions):

SYMBOL	DESCRIPTION	MIN	TYP	MAX	UNIT
VDD	Supply Voltage	2.7	3.0	3.3	V
T <sub>amb</sub>	Ambient Temperature	-20	27	+75	$^{\circ}$

# 7 Pins Description

Figure 7-1. RDA5807M Top View

Table 7-1 RDA5807M Pins Description

SYMBOL	PIN	DESCRIPTION
GND	1,3,8	Ground. Connect to ground plane on PCB
FMIN	2	FM single input
RCLK	6	32.768KHz crystal oscillator and reference clock input
SDIO	5	Data input/output for serial control bus
SCLK	4	Clock input for serial control bus
VDD	7	Power supply
ROUT,LOUT	9,10	Right/Left audio output

**Table 7-2** Internal Pin Configuration

SYMBOL	PIN	DESCRIPTION
FMIN	2	FMIN FMS
RCLK	6	VDD
SDIO /SCLK	5/4	SDIO\SCLK Sin Sout

# 8 Application Diagram

### 8.1 Audio Loading Resistance Larger than $32\Omega$ & Reference Clock Application:

Figure 8-1. RDA5807M FM Tuner Application Diagram (Reference Clock Application)

### 8.1.1 Bill of Materials:

COMPONENT	VALUE	DESCRIPTION	SUPPLIER
U1	RDA5807M	Broadcast FM Radio Tuner	RDA
UI	RDA3607WI	Broadcast Fivi Radio Turiei	RUA
J1		Common 32Ω Resistance Headphone	
L1/C1	100nH/24pF	LC Chock for FMIN Input	Murata
C3,C4	4.7µF	Audio AC Couple Capacitors	Murata
C2	22nF	Power Supply Bypass Capacitor	Murata
C7	100pF	AC Couple Capacitors	Murata
ESD		TVS	
F1/F2	1.5K@100MHz	FM Band Ferrite	Murata
R1,R2	10ΚΩ	I <sup>2</sup> C Bus Pull-up Resister	Murata

## 8.2 Audio Loading Resistance Larger than 32 $\Omega$ & DCXO Application:

Figure 8-2. RDA5807M FM Tuner Application Diagram (32.768K crystal)

### 8.2.1 Bill of Materials:

COMPONENT	VALUE	DESCRIPTION	SUPPLIER
U1	RDA5807M	Broadcast FM Radio Tuner	RDA
J1		Common 32Ω Resistance Headphone	
L1/C1	100nH/22pF	LC Chock for FMIN Input	Murata
C3,C4	12 <mark>5</mark> μF	Audio AC Couple Capacitors	Murata
C2	22nF	Power Supply Bypass Capacitor	Murata
F1/F2	1.5K@100MHz	FM Band Ferrite	Murata
R1,R2	10ΚΩ	I <sup>2</sup> C Bus Pull-up Resister	Murata

# 9 Physical Dimension

Figure 9-1 illustrates the package details for the RDA5807M. The package is lead-free and RoHS-compliant.

Figure 9-1. 10-Pin MSOP

## 10 PCB Land Pattern

Figure 10-1. Classification Reflow Profile

Profile Feature	Sn-Pb Eutectic Assembly	Pb-Free Assembly
Average Ramp-Up Rate $(T_{Smax} \text{ to } T_p)$	3 °C/second max.	3 °C/second max.
Preheat		
-Temperature Min (T <sub>smin</sub> )	100 °C	150 °C
-Temperature Max (T <sub>smax</sub> )	100 °C	200 °C
-Time (t <sub>smin</sub> to t <sub>smax</sub> )	60-120 seconds	60-180 seconds
Time maintained above:		
-Temperature (T <sub>L</sub> )	183 °C	217°C
-Time (t <sub>L</sub> )	60-150seconds	60-150 seconds
Peak /Classification Temperature(T <sub>p</sub> )	See Table-II	See Table-III
Time within 5 °C of actual Peak Temperature (t <sub>p</sub> )	10-30 seconds	20-40 seconds
Ramp-Down Rate	6 °C/second max.	6 °C/seconds max.
Time 25 °C to Peak Temperature	6 minutes max.	8 minutes max.

**Table-I Classification Reflow Profiles** 

Package Thickness	Volume mm³ <350	Volume mm³ ≥350
<2.5mm	240 + 0/-5 ° C	225 + 0/-5 ° C
≥2.5mm	225 + 0/-5 ° C	225 + 0/-5 ° C

Table – II SnPb Eutectic Process – Package Peak Reflow Temperatures

Package Thickness	Volume mm <sup>3</sup> <350	Volume mm <sup>3</sup> 350-2000	Volume mm³ >2000
<1.6mm	260 + 0 °C *	260 + 0 °C *	260 + 0 °C *
1.6mm – 2.5mm	260 + 0 °C *	250 + 0 ° C *	245 + 0 °C *
≥2.5mm	250 + 0 °C *	245 + 0 ° C *	245 + 0 ° C *

<sup>\*</sup>Tolerance : The device manufacturer/supplier **shall** assure process compatibility up to and including the stated classification temperature(this mean Peak reflow temperature + 0 °C. For example 260+ 0 °C) at the rated MSL Level.

Table – III Pb-free Process – Package Classification Reflow Temperatures

- **Note 1:** All temperature refer topside of the package. Measured on the package body surface.
- **Note 2:** The profiling tolerance is + 0 ° C, X ° C (based on machine variation capability)whatever
  - is required to control the profile process but at no time will it exceed 5 ° C. The producer assures process compatibility at the peak reflow profile temperatures defined in Table –III
- **Note 3:** Package volume excludes external terminals(balls, bumps, lands, leads) and/or non integral heat sinks.
- **Note 4:** The maximum component temperature reached during reflow depends on package the thickness and volume. The use of convection reflow processes reduces the thermal gradients between packages. However, thermal gradients due to differences in thermal mass of SMD package may sill exist.
- **Note 5:** Components intended for use in a "lead-free" assembly process **shall** be evaluated using the "lead free" classification temperatures and profiles defined in Table-I II III whether or not lead free.

# **RoHS Compliant**

The product does not contain lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBB) or polybrominated diphenyl ethers (PBDE), and are therefore considered RoHS compliant.

# **ESD Sensitivity**

Integrated circuits are ESD sensitive and can be damaged by static electricity. Proper ESD techniques should be used when handling these devices.

## **Change List**

REV	DATE	AUTHER	CHANGE DESCRIPTION
V1.0	2011-05-23	Chun Zhao	Original Draft.

## 11 Notes:
